BEATA - Need adjusted care, supervision and working methods

What is BEATA?	Aim	Why is BEATA needed?	Phases	Benefits
A change-and development work including all special accommodations for elderly and disabled	Investigate how safety- creating technology in combination with changed working methods for staff can be used in order to work smarter and use the resources where and when they are needed	Demographics: elderly population Competence supply is a big challenge now and in the future Work smarter and use the resources where and when they are needed	Phase 1: Preparations Phase 2: Development Phase 3: Procurement Phase 4: Implementation Phase 5: Management	90% reduction in physical inspection visits, enabling more efficient use of human resources Discovers if the care recipients is in a risky situation

Open procurement process - we have a supplier contracted

Resources: Technical devices - RoomMate Company that can deliver solutions and management of the tools. **The scope:** 1400 care recipients 1800 staff 40 special accommodations

Provided and standard: By the municipality of Linköping, standard for all special accommodations. Both private and municipal. Challenge: Develop new working methods for the staff and learn how to use the techniques instead of physical visits.

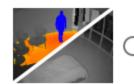

This is RoomMate

- Scans up to 30 sqm
- Creates a thermal image of the room
- Image analysis anonymisation filter and encryption locally in the unit
- Detects if the care recipient is in a risky situation
 - supervises and informs the staff
- Requires no active supervision
- Personalization
- Lowers the risk of aberrancy

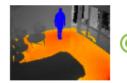

What type of supervision is used

Supervision can be carried out with anonymized image and also with detailed image.

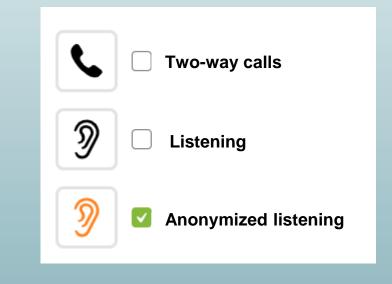

Supervision can only be carried out with a detailed image.

Supervision can only be carried out with an anonymised image.

No photos allowed in this apartment.

Implementation - difficulties encountered, success factor
